

Ground Master Hosta

Ground Master Hosta

Hosta 'Ground Master'

Plant Height: 10 inches

Flower Height: 18 inches

Spread: 3 feet

Spacing: 30 inches

Sunlight:

Hardiness Zone: 2a

Other Names: Plantain Lily, Funkia

Description:

A small to medium sized variety featuring mounds of dark green leaves with golden margins that fade to cream by summer; lilac-purple flowers appear on tall scapes in the summer months; adds color, contrast and texture to beds, borders and containers

Ornamental Features

Ground Master Hosta features dainty spikes of lilac purple tubular flowers rising above the foliage from mid to late summer. Its attractive textured narrow leaves remain emerald green in color with showy creamy white variegation throughout the season.

Landscape Attributes

Ground Master Hosta is a dense herbaceous perennial with tall flower stalks held atop a low mound of foliage. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Ground Master Hosta is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Groundcover

Ground Master Hosta

Planting & Growing

Ground Master Hosta will grow to be about 10 inches tall at maturity extending to 18 inches tall with the flowers, with a spread of 3 feet. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 30 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
