### Independence Hosta *Hosta 'Independence'*

Height: 26 inches

Spread: 20 inches

Spacing: 16 inches

Sunlight:

Hardiness Zone: 3a

Other Names: Plantain Lily, Funkia

Group/Class: Designer Hosta Collection

#### Description:

This variety produces extraordinary foliage that is deep green and blue-green in the center, with a wide white margin speckled in green; provides beautiful texture and contrast to other plants; lavender spikes of flowers in mid-summer

#### Ornamental Features

Independence Hosta features dainty spikes of lavender tubular flowers rising above the foliage in mid summer. Its attractive glossy heart-shaped leaves remain dark green in color with distinctive white edges and tinges of light green throughout the season.

#### Landscape Attributes

Independence Hosta is a dense herbaceous perennial with tall flower stalks held atop a low mound of foliage. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Independence Hosta is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Groundcover

### Planting & Growing

Independence Hosta will grow to be about 22 inches tall at maturity, with a spread of 20 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 16 inches apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
